3 INTRODUCTION

The National Engineering Robotics Contest is a joint project of the National University of Sciences and Technology and STEM Careers Programme HEC to promote research in robotics and its related fields in Pakistan. We, from the Department of Mechatronics Engineering welcome you all to participate in 15th National Engineering Robotics Contest (NERC 2017). This competition will provide a common platform for the integration and evaluation of various electromechanical designs, control and path planning algorithms, and agent architectures. Over the years, NERC has grown increasingly popular among students as well as engineering departments across the country. Engineering students from all over Pakistan participate in this competition. This not only adds value to the competition but also resolves our pledge to bring exciting new challenges every year for the advancement of robotics community at an increasingly wider scale. Robotics is a buzz word at today’s technology forefronts. Due to exponential advancements in fields like high performance computing, computer vision, computer networks, material sciences and power electronics, the growth experienced by robotics in past few years is unprecedented. Robotics is the only field which can add precision while replacing the slow manual labor in the contemporary industrial world. Thus, this field faces enormous pressure from industry to produce all-purpose mobile manipulator robots which can perform simple tasks like grab, navigate and place objects at desired locations autonomously. The future of Pakistan relies heavily on advancement in the fields of engineering and science and events of this nature will encourage and motivate students to improve their technical skills in leaps and bounds.

Given the high demand of robots in disaster management operations, this year’s theme has been designed to bring together major aspects of robotic disaster management to the forefront. We hope this theme will not only raise awareness about the use of robots in disaster management but also propel major universities to come up with innovative solutions to help when calamities such as natural disasters strike our country.
4 CATEGORIES

There are two categories of the contest: Indigenous Robot category, and Modular Robot Category. The purpose of this contest is to develop a sense of problem-solving, technical design and ingenuity among the contestants.

4.1 INDIGENOUS
Indigenous category includes robots that are constructed from scratch. Their mechanical structure, controls etc. are designed and fabricated by the teams themselves. The electronic control modules (including all electronic boards and motor drivers etc.) should be designed and manufactured by the students.

4.2 MODULAR
Modular/Lego category includes robots that are developed using ready-made kits for example Lego, Vex Robotics kits or EDVON kits.

This document describes the theme for Category 1 – Indigenous Robots.

5 CONTEST STRUCTURE

The contest will consist of two stages:

1. Heats/Qualifying Rounds
2. Head to head matches.

5.1 QUALIFYING ROUNDS
Each robot will participate in the qualifying rounds (heats). There will be no head to head matches in heats. For qualifying rounds following rules will be observed:

5.1.1 There will be NO head to head matches. Each team will individually run their robots.

5.1.2 If the points of both teams are equal, decision will be made based on time taken by both team. The team with shortest time will be declared winner. If time of both teams is also same the decision of the winner will be based on the shortest distance from the next objective from the current position.

5.1.3 Each team will be provided maximum of 3 minutes to run their robots.

5.1.4 A team can take as many retries as it want within 3 minutes without any penalty but only the total time taken by the team will be recorded.

5.1.5 When the team takes a retry the score is reset to zero.
5.1.6 When the team is ready and the whistle is blown, time will be started.

5.1.7 If a robot is not able to successfully complete the task in time then the time when team will call it off will be recorded as the finish time.

5.2 **HEAD TO HEAD MATCHES**

The top 32 teams from the qualifying rounds will go on into the final rounds for head to head matches. The winners will be decided through a final match. Runners up will be decided based on the outcomes of the semi finals and quarter finals.

6 **CONTEST THEME**

The focus of NERC 2016 was to create search and rescue robots which had to save scientists in a burning building. This year robots will be completing another simulated search and rescue mission in form of disaster management. Robots must supply much needed relief aid to a disaster stricken area, where all the bridges are broken.

The robots have to supply water, food, medicine and hygiene kits to disaster stricken areas. They can drop these supplies at “houses” denoted by colored boxes. Two of the supplies must be transported to houses that can only be accessed by crossing a bridge. Unfortunately the bridge is broken. The robots must find a way to cross the bridge and reach the other side. Once there the robots can deliver the remaining aid to the right locations. The first team to deliver all aid and cross the bridge will be declared the winner.

![Contest Arena Diagram](image)

*Figure 1 Contest Arena*
6.1 The Contest arena shown in Figure 1 Contest Arena consists of two sub arenas, both the sides are identical to each other and their colored boxes locations are similar.

6.2 Laminated wooden sheets (lasani) are used for the construction of the arena. The floor of each will be of the white colour shown in the map.

6.3 The walls have a height of 4 inches throughout the arena except the wall labelled B which has a height of 2 inches.

6.4 Each Sub arena is divided in to two zones Z1 and Z2. The robot will enter the arena from Z1.

6.5 Zones Z1 and Z2 are disconnected.

6.6 The robot can only enter in zone Z2 from Z1 by crossing the bridge. The bridge is as shown in Figure 1. Contest Arena. The robot must cross the bridge.

6.7 Each sub arena has 4 houses. Z1 has two houses. Z2 had two houses.

6.8 A house is denoted by a coloured box. There are 4 different coloured boxes; red, blue, green and yellow.

6.9 As in Figure 1 Contest Arena, the locations of the houses are fixed but the colour for each location is not fixed.

6.10 For Z2, the supplies must be dropped in the two houses one by one. After dropping the aid in one house the robot must follow the zig-zag wall from any side to reach towards the second house placed on the other side. The robot must not drop the aid in any box from over and above the wall.

6.11 The supplies are considered to be small square boxes; red for medicine, blue for water, green for hygiene kits and yellow for food.

6.12 The robot should drop the correct supplies in the correct houses.

6.13 The size of each house is 6x6x6 inches.

6.14 The robot should have these square boxes and the plank/object used to cross the bridge preloaded.

6.15 In order to cross the bridge the robot must place some object to fill or cover the gap as shown in Annexure C.

6.16 Though the locations of the houses are fixed, their type (denoted by colour) is not. The types of houses will be random.

6.17 There will always be 4 houses, one for each type of aid.

7 ROBOT OPERATION

The qualifying teams (those which qualify for the final rounds) will compete with each other in a knockout format. In each match two teams will be pitted against each other, running their
robots side by side in the contest arena. Teams will be declared as Team A or Team B based on the coin toss before every match. Team A will run their robot in the left side and Team B will run their robot right side. The robot will be placed at the starting location facing towards the line leading towards the houses, as illustrated in Figure 1 Contest Arena.

Once turned on, the robot must be self-controlled without any human intervention. Remote-control of any sort (wired or wireless) CANNOT be used. Contestants are NOT allowed to touch their robots or enter the Contest Arena after startup. After the blow of whistle, the robot will have 3 minutes to complete the task.

During a retry the layout of the arena shall remain SAME however the point scoring will restart from zero. Any of the preloaded objects of the robot that are in the arena will be loaded in the robot again. The robot may navigate through the arena using any suitable technique. The robot may not displace any house. Displacing any item inside the arena will result in a retry. If the participating team sees that their robot has lost track of its location and is facing trouble localizing itself, the team can ask for a retry. During its motion, the robot may touch the walls of the arena without damaging them but it is not allowed to use any sort of tactile sensor to sense the walls or obstacles. This will result in disqualification.

In case of a tie, the contestant may be required to run a rematch on the discretion of the judges.

For a particular match, both teams will face the same layout of the arena, i.e. the colors of the houses will be the same. Winning will depend on smart decisions and swift execution of the task.
8  **POTTING TECHNIQUE**

8.1 The robot may not throw the square box. It can only drop the square box after reaching the house.

8.2 The Robot must not use any destructive or dangerous methods to displace any house.

8.3 The task is completed successfully when the robot bridges the gap and pots all 4 square boxes in the correct order.

8.4 The size of the square box (cube) is 1x1x1 inches.

9  **CROSSING THE BRIDGE**

9.1 The robot must cross the bridge by placing some object over the bridge or by filling the gap properly. The complete information of the gap can be obtained from Annexure B and C.

9.2 Any object can be used to cross the bridge.

9.3 The object that is used to bridge the gap will be preloaded in the robot and a part of the robot. However, the preloaded object will not be included as part of the robot during the robot inspection.

9.4 The minimum thickness of the preloaded object must be 3/16 inches.

9.5 The maximum allowable size of the plank is 12x8 inches.

9.6 The robot cannot cross the bridge without placing an object. This means that treads cannot be used.

9.7 All four tyres of the robot must be on that object while crossing the entire gap of the bridge. The tyres at any time should not touch the surface of the ditch. If any one of the tyre touches the ditch, it will result in a retry.

9.8 The angle of the two ramps as shown in Annex C ranges between 9-13 degrees.

10 **POINTS**

The point scoring is shown below in Table 1 Point Scoring.

*Table 1 Point Scoring*

<table>
<thead>
<tr>
<th>Task</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>1  *Supplying aid to area 1</td>
<td>15 Points</td>
</tr>
<tr>
<td>2  *Supplying aid to area 2</td>
<td>15 Points</td>
</tr>
<tr>
<td>3  Filling the gap of the bridge</td>
<td>20 Points</td>
</tr>
<tr>
<td>4  Crossing the bridge</td>
<td>15 Points</td>
</tr>
<tr>
<td>5  Entering Zone 2</td>
<td>5 Points</td>
</tr>
</tbody>
</table>
6 *Supplying aid to area 3 15 Points
7 *Supplying aid to area 4 15 Points
Total Points 100 Points

*Supplying the wrong aid to the wrong area will result in only half points.

10.1 Deduction of Points
The deduction of points is show below in Table 2 Deduction of Points

Table 2 Deduction of Points

</table>

11 Rules
The following are the rules governing the contest.

11.1 General
11.1.1 The Contest judges may stop any robot at any time if they feel that it is performing, or is about to perform, any action that is dangerous or hazardous to people or equipment.

11.1.2 All Electronic Circuitry must be designed and fabricated by the Contestants themselves.

11.1.3 Maximum effort in the design and fabrication of the robot should be generated by contestants themselves.

11.1.4 Contestants are allowed to use only certain electronic components, list for which is attached at the end.

11.1.5 Additional information regarding the contest rules and regulations may be found in the FAQs and will be considered as part of the theme and rules. New FAQs are uploaded frequently so keep watching the FAQ corner for new information.
11.1.6 Any correspondence with the NERC officials via e-mail telephone or any other means will not be considered as part of the rules.

11.1.7 You cannot pick or place any object over the walls.

11.1.8 If both the teams have scored same points but are not able to complete the task in allocated time slot decision of the winner will be on judges’ discretion who will determine which robot is closer to finish the task first.

11.1.9 If both teams have scored the same points, have the same time and are at the same distance from the finish point, a coin toss will be used to decide the winner.

11.1.10 If any team wants to launch a protest (of any kind), they must do so within 15 minutes of the end of their match. The procedure is outlined in 0The following behavior shall be considered for disqualification by the referee and the team could possibly be disqualified:

11.1.11 Attempting to damage the game field.

11.1.12 Performing any act that fails to comply with the spirit of Fair Play

11.1.13 Protest Procedure.

11.1.14 In all matters of interpreting the rules before and during the Contest and in any issues not covered by these rules, the decisions of the Contest Judging Committee will be final.

11.2 Teams

11.2.1 The Robots can be built by teams of currently registered students from Engineering Institutions and Polytechnic Institutions. Each team can comprise of a maximum 6 members.

11.2.2 If the students from two different Institutes/Universities join hands and form a team in collaboration then the name of the Institute/University with maximum number of students in such a team would be registered.

11.3 Robot Size and Weight

The robot must fit within 12 in X 12 in square at the time of the measurement. If the area of the robot base is more than a 12 by 12 in square, but less than a 14 by 14 in square, then points will be deducted. The maximum permissible height of the robot is 12 in. Any robot which does not fit in 14 in X 14 in square or exceeds a height of 12 in will be disqualified. The weight and size of the robot will be measured without the object (to bridge the gap) loaded in the robot. The size and thickness of the preloaded plank will be measured during the robot inspection and it must qualify the allowed size and thickness as defined in para 9 of the theme. All robots will be carefully measured. All sensors mounted on the robot will be counted as part of the robot’s
total dimensions. If contestants want to add a flag, hat or other purely decorative, non-functional items to the robot, they may do so. The decorations may be removed for measurement purposes. The weight of the robot excluding decorations must not exceed 12 kg. Penalties as detailed in 10.1 Deduction of Points will be levied if the robot does not fulfill the size and/or weight criteria.

11.4 **ROBOT OPERATION**

11.4.1 Any team that damages the arena will be disqualified.

11.4.2 The robot must not use any harmful substances such as oil, petrol etc. in its operation that can damage the arena.

11.4.3 The Robot CANNOT split after the start of the game, only one Robot is allowed to compete at a time.

11.4.4 The robot must not use any destructive or dangerous methods to displace any obstacle or box.

11.5 **SENSORS**

11.5.1 Robot is not allowed to use tactile sensor of any type for sensing the walls.

11.5.2 Ultra-Sonic Range detectors (SONARs) or IR based proximity sensors (models specified in the components’ list attached) must be used for sensing walls.

11.5.3 The team may use any off-the-shelf encoders if they feel the necessity. Self-made encoders from discrete components are also allowed.

11.6 **ELECTRONICS**

11.6.1 All electronic circuitry must be designed and fabricated completely by the participants themselves. Circuits should not be fabricated by the help of any professional developers. Only the modules specified in the components list may be bought directly.

11.6.2 Microcontrollers specified in the component list must be used for controlling your robots. You can also use Microcontroller development boards specified in the list only. Microprocessors and Single Board Computers are not allowed.

11.6.3 Motor drive circuits should be designed and fabricated by participants themselves and made from discrete components like Transistors and logic circuitry. H-bridge IC’s like L297 or L298 are not allowed. However you may use Gate driver IC’s e.g. IR2101/IR2110 etc. These restrictions apply only to the drive circuits and not those used to control the mechanism.
11.6.4 No prefabricated modules are allowed, unless listed in the components list or allowed by the NERC coordinator. If a component needs to be added then all of its specification (datasheet, picture, location to purchase, price) MUST be emailed for formal permission.

11.6.5 All other components can be used in your circuitry. In case of any query, questions shall be emailed to NERC Coordinator at nerc@cheme.nust.edu.pk. The FAQs section on the website shall be considered part of the theme.

**Note:** Only the theme documents and the questions in the FAQ section of the official website (www.nerc.com.pk) shall be considered as official notifications.

### 11.7 Power Supply

11.7.1 The robot must be battery-powered.

11.7.2 The robot must not have any wired connections with its surroundings.

11.7.3 Voltage of the machine’s electrical power source must not exceed 48 volt DC. **Power banks may be used.**

11.7.4 Power sources that are considered dangerous or unsuitable by the contest Officials shall not be permitted.

### 11.8 Duration of Match

11.8.1 Each match will be of maximum 3 minutes.

11.8.2 Teams will be given 1 minute for setting up the Robot at the start.

11.8.3 Robot can start at the instant when the start signal is given and a whistle is blown. Robot must be constructed so that it can be started in minimum possible steps.

11.8.4 Once the Robot moves, team members will not be allowed to touch the Robot or enter the Contest Arena.

11.8.5 Timing shall start once the start signal is given and the whistle is blown.

11.8.6 Time would be stopped as soon as robot drops supplies in the last drop zone in Z2. If a robot is not able to successfully complete the task then the time when team will call it off will be recorded as the finish time. The team must leave their robot as it is on its current location when time stop is called by them. They may NOT pick their robot up till the referee announces the end of the match. The team is not allowed to take a retry after the time has stopped.
11.8.7 The team which drops all 4 supplies in the correct houses and crosses the bridge first will be declared the winner of the match.

11.8.8 If both teams fail to drop all 4 supplies and cross the bridge, within the time limit, the team scoring more points will be declared the winner of the match.

11.8.9 If both the teams have scored same points but are not able to complete the task in allocated time slot decision of the winner will be on judges’ discretion who will determine which robot is closer to finish the task first.

11.9 **RETRY**

If the robot is strayed due to some reason, retries are allowed.

11.9.1 There is no limitation on the number of retries and a team can take as many retries within the 3 minutes duration of the match. No Points will be deducted for retries.

11.9.2 Each team would be provided a flag of their respective team. If a team wants to take a retry, the flag bearer must raise the flag and say clearly “retry”. Once the referee announces a retry, the team shall place its robot at its starting location and will reload all the aids and object (to bridge the gap) in the robot.

11.9.3 If a team wants to stop their robot during the match, the flag bearer must raise the flag and say “stop”. The team can then turn off their robot but they must not move it. The time at which the robot is stopped would be recorded as the final time.

11.9.4 For each retry, robots must be started again from the Start point. Points will reset to zero.

11.9.5 Separate time for individual retries will NOT be recorded or maintained. When a team takes a retry it is only allowed to restart the robot.

11.9.6 Changing the microcontroller or reprogramming the robot is **Not Allowed.** A team may change the batteries of the robot if required.

11.9.7 If the contestants enter the arena during the match, it will automatically be counted as a retry.

11.9.8 **All four tyres of the robot must be on that object while crossing the entire gap of the bridge. The tyres at any time should not touch the surface of the ditch. If any one of the tyre touches the ditch, it will result in a retry.**

11.10 **DISQUALIFICATION**

The following behavior shall be considered for disqualification by the referee and the team could possibly be disqualified:
11.10.1 Attempting to damage the game field.
11.10.2 Performing any act that fails to comply with the spirit of Fair Play

11.11 PROTEST PROCEDURE
The protest procedure is as follows:

11.11.1 The team must launch a protest (submit a complete protest form to the head jury) within 15 minutes of the end of their match.

11.11.2 The team must collect the protest form from the head jury on request or use a hard copy of the form in Anx D.

11.11.3 The team must submit a protest fee of Rs. 5000/- along with the protest form.

11.11.4 A complete protest form includes submission of the protest fee.

11.11.5 The head jury will forward the case to the judges.

11.11.6 The judges will decide on the protest’s validity and render their decision.

11.11.7 The judges’ decision will be final.

11.11.8 In case of noncompliance of any of points above the protest will not be considered valid.

12 TEST RUN
Contestants will be given time for trial run one day before the contest to calibrate their robot/sensors on the actual arena/game field.
Annex A  COMPONENTS LIST

Please see the components below. In case of any query, questions shall be emailed to NERC Coordinator at nerc@ceme.nust.edu.pk. The FAQs section on the website shall be considered part of the theme.
